IN THE CLAIMS

1. (currently amended) A method for treating mammalian ventricular dysfunction, and heart failure, ~~or~~ and imbalance of autonomic tone ~~or~~ and imbalance of the endocrinological system, comprising:
providing at least one electrode into electrical communication with a region associated with of nervous tissue in a patient's body;
automatically applying electrical stimulation via the at least one electrode to improve ~~the cardiac efficiency of the patient's heart in response to receipt of a physiologic signal indicative of a symptoms of~~ at least one of ventricular dysfunction, heart failure, ~~or~~ imbalance of autonomic tone and imbalance of the or neuro-endocrinological system of the patient; and
delivering one of a overdrive cardiac pacing therapy and a post-extra systolic potentiation therapy for at least one cardiac cycle.
2. (previously presented) The method of claim 1, wherein providing at least one electrode further comprises providing at least one implanted electrode adapted to be located adjacent to a patient's spine.
3. (original) The method of claim 1, wherein providing at least one electrode further comprises providing at least one electrode located external to the patient's body.
4. (previously presented) The method of claim 1, wherein providing at least one electrode further comprises providing at least one electrode adapted to be located in a subcutaneous space of the patient's body.
5. (previously presented) The method of claim 1, wherein applying electrical stimulation further comprises:

Applicants: Hill et al.

Page 3

monitoring one or more predetermined physiologic parameters of the patient; and adjusting the electrical stimulation based on the one or more of the monitored predetermined physiologic parameters.

6. (original) The method of claim 5, further comprising administering cardiac resynchronization therapy; and wherein adjusting the electrical stimulation further comprises adjusting the electrical stimulation based on the administered cardiac resynchronization therapy.

7. (original) The method of claim 1, wherein providing at least one electrode further comprises providing at least one electrode in a region containing a nerve associated with a trunk portion of the body of the patient.

8. (original) The method of claim 1, wherein providing at least one electrode further comprises providing at least one electrode in a region containing at least one thoracic vertebrae.

9. (original) The method of claim 1, wherein providing at least one electrode further comprises providing at least one electrode in a region containing at least one thoracic vertebrae in the range of T1-T12.

10. (original) The method of claim 1, wherein providing at least one electrode further comprises providing at least one electrode in a region containing thoracic vertebrae T1-T12.

11. (original) The method of claim 1, wherein providing at least one electrode further comprises providing at least one electrode in a region containing at least one thoracic nerve bundle.

Serial No. 10/039,307
Page 4

12. (original) The method of claim 1, wherein providing at least one electrode further comprises providing at least one electrode in a region containing at least one thoracic nerve bundle in the range of T1-T12.

13. (original) The method of claim 1, wherein providing at least one electrode further comprises providing at least one electrode in a region containing thoracic nerve bundles T1-T12.

14. (original) The method of claim 1, wherein providing at least one electrode further comprises providing at least one electrode located adjacent to an intrinsic cardiac ganglia.

15. (previously presented) The method of claim 1, wherein providing at least one electrode further comprises providing at least one electrode adapted to be located within a cardiac or vascular structure for intracardiac or intravascular neurostimulation.

16. (original) The method of claim 1, wherein the at least one electrode is selected from the group consisting of implanted electrodes, cutaneous electrodes, and subcutaneous electrodes.

17. (currently amended) An apparatus for treating mammalian ventricular dysfunction and, heart failure, ~~or~~ and imbalance of autonomic tone and imbalance of the ~~or~~ endocrinological system, comprising:

at least one electrode adapted to be located in a region associated with nervous tissue in a patient;

means for automatically applying electrical stimulation via the at least one electrode to improve symptoms ~~at least one of~~ ventricular dysfunction, heart failure, ~~or~~ imbalance of autonomic tone and imbalance of the ~~or~~ neuro-

endocrinological system of the patient in response to a physiologic signal of the patient; and

means for delivering one of a overdrive cardiac pacing therapy and a post-extra systolic potentiation therapy.

18. (previously presented) The apparatus of claim 17, wherein the at least one electrode further comprises at least one implanted electrode adapted to be located adjacent a patient's spine.

19. (previously presented) The apparatus of claim 17, wherein the at least one electrode is adapted to be located external to the patient's body.

20. (previously presented) The apparatus of claim 17, wherein the at least one electrode is adapted to be located in a subcutaneous space of the patient's body.

21. (original) The apparatus of claim 17, wherein means for applying electrical stimulation further comprises:

means for monitoring one or more predetermined physiologic parameters of the patient; and

means for adjusting the electrical stimulation based on the one or more predetermined physiologic parameters.

22. (original) The apparatus of claim 21, further comprising means for administering cardiac resynchronization therapy; and wherein the means for adjusting the electrical stimulation further comprises means for adjusting the electrical stimulation based on the administered cardiac resynchronization therapy.

Applicants: Hill et al.
Serial No. 10/039,307
Page 6

23. (previously presented) The apparatus of claim 17, wherein the at least one electrode is adapted to be located in a region containing a nerve associated with a trunk portion of the body of the patient.

24. (previously presented) The apparatus of claim 17, wherein the at least one electrode is adapted to be located in a region containing at least one thoracic vertebrae.

25. (previously presented) The apparatus of claim 17, wherein the at least one electrode is adapted to be located in a region containing at least one thoracic vertebrae in the range of T1-T12.

26. (previously presented) The apparatus of claim 17, wherein the at least one electrode is adapted to be located in a region containing at least one thoracic nerve bundle.

27. (previously presented) The apparatus of claim 17, wherein the at least one electrode is adapted to be located in a region containing at least one thoracic nerve bundle in the range of T1-T12.

28. (currently amended) A method for treating ventricular dysfunction, and heart failure, ~~or~~ and imbalance of autonomic tone and imbalance of the ~~or~~ neuro-endocrinological system, comprising:

providing at least one electrode in a region associated with nervous tissue in a patient's body;

automatically applying electrical stimulation via the at least one electrode to improve symptoms at least one of ventricular dysfunction, heart failure, or imbalance of autonomic tone and imbalance of the ~~or~~ neuro-endocrinological system of the patient based at least in part on the monitoring one or more predetermined physiologic parameters of the patient;

Applicants: Hill et al.
Serial No. 10/039,307
Page 7

adjusting the electrical stimulation based on the one or more predetermined physiologic parameters; and

delivering one of a overdrive cardiac pacing therapy and a post-extra systolic potentiation therapy during at least one cardiac cycle.

29. (currently amended) A method for improving at least one of ventricular dysfunction and, heart failure and, ~~or~~ imbalance of autonomic tone and imbalance of the ~~or~~ neuro-endocrinological system, comprising:

providing at least one electrode in a region associated with nervous tissue in a patient's body;

automatically applying electrical stimulation via the at least one electrode to alter at least one of ventricular dysfunction, heart failure, or imbalance of autonomic tone or endocrinological system based at least in part upon a monitoring one or more predetermined physiologic parameters of the patient;

adjusting the electrical stimulation based on the one or more predetermined physiologic parameters; and

delivering one of a overdrive cardiac pacing therapy and a post-extra systolic potentiation therapy for at least one cardiac cycle.

30. (currently amended) An apparatus for treating mammalian ventricular dysfunction, and heart failure, ~~or~~ and imbalance of autonomic tone and imbalance of the ~~or~~ neuro-endocrinological system, comprising:

at least one electrode adapted to be located in a region associated with nervous tissue in a patient's body;

means for automatically applying electrical stimulation via the at least one electrode to improve ~~at least one of~~ symptoms of ventricular dysfunction, heart failure, ~~or~~ and imbalance of autonomic tone and imbalance of an ~~or~~ endocrinological system of the patient;

at least one sensor associated with the patient and adapted to monitor one or more predetermined physiologic parameters of the patient;

Applicants: Hill et al.
Serial No. 10/039,307
Page 8

means for both automatically applying and automatically adjusting the electrical stimulation based on the one or more predetermined physiologic parameters; and

means for delivering one of a overdrive cardiac pacing therapy and a post-extra systolic potentiation therapy for at least one cardiac cycle.

31. (currently amended) An apparatus for improving ~~at least one of~~ mammalian ventricular dysfunction and, heart failure and, ~~or~~ imbalance of autonomic tone and imbalance of the ~~or~~ endocrinological system, comprising:

at least one electrode adapted to be located in a region associated with nervous tissue in a patient's body;

means for automatically applying electrical stimulation via the at least one electrode to alter the functioning of the patient's heart;

at least one sensor associated with the patient and adapted to monitor one or more predetermined physiologic parameters of the patient;

means for both automatically applying and automatically adjusting the electrical stimulation based on the one or more predetermined physiologic parameters; and

delivering one of a overdrive cardiac pacing therapy and a post-extra systolic potentiation therapy for at least one cardiac cycle.

32. (currently amended) An apparatus for improving ~~at least one of~~ mammalian ventricular dysfunction and, heart failure and, ~~or~~ imbalance of autonomic tone and imbalance of the ~~or~~ endocrinological system, comprising:

at least one electrode adapted to be located in a region associated with nervous tissue in a patient's body;

at least one sensor associated with the patient and adapted to monitor one or more predetermined physiologic parameters of the patient;

a controller adapted to automatically apply electrical stimulation via the at least one electrode to alter at least one of ventricular dysfunction, heart failure, or

Applicants: Hill et al.
Serial No. 10/039,307
Page 9

imbalance of autonomic tone or endocrinological system , and the controller being further adapted to automatically adjust the electrical stimulation based on the one or more predetermined physiologic parameters; and
means for delivering one of a overdrive cardiac pacing therapy and a post-extra systolic potentiation therapy.

33. (currently amended) An apparatus for treating ~~at least one of~~ imbalance of autonomic tone and imbalance of the ~~or~~ endocrinological system and, ventricular dysfunction and heart failure, comprising:

at least one electrode adapted to be located in a region associated with nervous tissue in a patient;

a controller adapted to automatically apply electrical stimulation via the at least one electrode based upon a physiologic signal of the patient to improve the cardiac efficiency of the patient's heart; and

means for delivering one of a overdrive cardiac pacing therapy and a post-extra systolic potentiation therapy.

34. (original) The apparatus of claim 33, wherein the at least one electrode is adapted for positioning in a region containing thoracic nerve bundles T1-T12.

35. (original) The apparatus of claim 33, wherein the at least one electrode is adapted for positioning adjacent to an intrinsic cardiac ganglia.

36. (original) The apparatus of claim 33, wherein the at least one electrode is adapted for positioning within a cardiac or vascular structure for intracardiac or intravascular neurostimulation.

37. (original) The apparatus of claim 33, wherein the controller includes a driver circuit to deliver electrical stimulation to a cardiovascular system in the patient's body.

Applicants: Hill et al.
Serial No. 10/039,307
Page 10

38. (original) The apparatus of claim 37, wherein the driver circuit includes a circuit to deliver pacing pulses.

39. (original) The apparatus of claim 37, wherein the driver circuit includes a circuit to deliver high-voltage stimulation.

40. (original) The apparatus of claim 33, wherein the controller includes a drug-delivery device to provide a biologically-active agent to the patient.
